Title: Plans For The Construction Of A Hot Air Balloon

Author: Unknown  
-----

First you must have a  
wicker balloon basket  
made, large enough to  
carry several  
passengers. Then you'll  
need a big iron  
cauldron, to hold a fire  
to generate the hot air.  
Next you must have a  
huge bag sewn out of  
silk, to hold the hot  
air in. Lastly, get  
enough rope to tie the  
balloon securely to the  
basket. Once you've  
gathered all of these  
together, use these  
plans to assemble them.  
When flying your  
balloon, you'll find  
that a ship's anchor  
makes the best ballast,  
and is also useful for  
stopping the balloon  
where and when you wish.
